Attached are Tables 4a, 5a, 8a and Figure 1a which reflect a modification from the originally submitted work. The originally submitted work contained an adjustment (increase) of pre-1972 Trionizing exposures exclusive of Track and Unload. That adjustment has been removed from these new documents. In these documents, Trionizing exposure levels (exclusive of Track and Unload) for years prior to 1973 were obtained by assuming they were the same as the 1973 mean value. 1973 was used rather than 1972 because 1973 contains a much larger number of IH measurements, increasing confidence in the mean value. Please note that ore source adjustments were still made to all years prior to 1972.

Please let me know of any questions you may have.
